---

Hi,

I have a customer who gets the following error how can i fix this?. This siwhat the customer has told me: The has Windows XP Pro and Geovision version 8 software. It runs fine but the back-up is a issue.

It backsup okay, but when you try to run the CD it comes up with the attached error message. It displays the same error message no matter what PC we try to run it on. It runs one created on another Geo-vision machine okay. We have done a format on the PC and had it just with Windows, Geovision Software and Burning software (Nero) and it still does the same thing.

Any help will be aprecited.

I didn't find the right solution from the Internet.
