

Data analysis using GIS

Posted by jennermack - 02 Jun 2018 14:16

Hi,

I have been looking all over the LDSJOBS website and this LDSTECH website for quite sometime and have seen nothing about mapping or GIS. I would love to work for the church. I love analyzing data using GIS applications like ArcMap. I feel that the church's data should be analyzed using GIS applications and methods. I know this would greatly help the work of the Lord progress. Any suggestion? Please respond to this thread. Please see my LDSTECH profile and send me an email.

Any help will be appreciated.

I didn't find the right solution from the Internet.
