

READING GIS INTO ARCHICAD

Posted by jennermack - 02 Jun 2018 14:16

Hi,

Can anyone help me: I have been given a file originating from a GIS system. I would like to be able to access this information into Archicad, the extension o the file is SID. The information consists of a combined aerial photo with cadastral and land-use information on various layers. The cad overlay has been placed on the jpg aerial photo and I would not like to lose this advantage. Can anyone advise how to open and access this information in Archicad, maybe using a translator?

Any help will be appreciated.

I didn't find the right solution from the Internet.
